

HARD RED SPRING WHEAT VARIETIES

TCG-SPITFIRE YIELD ACROSS ENVIRONMENTS

TCG-Spitfire is a widely adapted, medium height, medium late maturing variety, with an excellent combination of yield and standability, with medium protein. Plant at normal to high seeding rates for your area and management practices; plan on fungicide for optimum disease control.

PVPA 1994

TCG-WILDFIRE BIG YIELD ON TOUGH GROUND

TCG-Wildfire is a medium tall, medium early maturing variety, with good standability and good yield potential on your difficult fields such as alkali and sugar beet ground. Protein is consistently medium across environments. Plant at normal rates for your area; plan on fungicide for disease control.

PVPA 1994

TCG-GLENNVILLE VERY EARLY & VERY SHORT

TCG-Glennville is a very early maturing, very short variety, with excellent standability, adapted to the northern region of the Northern Great Plains. Can be managed to achieve excellent yield with high protein. Plant at high rates for your area; plan on fungicide for optimum disease control.

PVPA 1994 pending

TCG-CORNERSTONE YIELD AND PROTEIN

TCG-Cornerstone is a medium short, medium mating variety with an excellent combination of standability, protein, and yield, similar to TCG-Spitfire, but with higher protein, less yield. Plant at normal to high seeding rates for your area and management practices; plan on fungicide for optimum disease control.

PVPA 1994

TCG-CLIMAX HIGH PROTEIN & TEST WEIGHT

TCG-Climax is a medium height, very late maturing variety, with an excellent combination of very high protein and Test Weight, very good standability* and yield potential. Plant at normal rates for your area, on good ground; plan on fungicide for optimum disease control. Can be susceptible to BLS.

PVPA 1994

*some atypical lodging observed at sites impacted by storms in 2018; avoid center pivots.

NEW: TCG-HEARTLAND EARLY YIELD & PROTEIN

TCG-Heartland is an early maturing, short variety with excellent standability, excellent yield potential, and high protein. Plant at high rates for your area; plan on fungicide for optimum disease control. TCG-Heartland is much like TCG-Glennville but more widely adapted. Certified seed will be available in 2020.

PVPA 1994 application pending

NEW: TCG-STALWART STEM SAWFLY RESISTANCE

TCG-Stalwart is a good standing, tall, medium maturity, solid stemmed HRS, with medium high protein levels. TCG-Stalwart is targeted for Western ND areas that are impacted by sawfly. TCG-Stalwart is susceptible to scab and BLS; plan on fungicide for optimum disease control. Certified seed will be available in 2020.

PVPA 1994 application pending

SPECIAL MARKET WHEATS

NEW: TCG-BRIGHT GREAT QUALITY DURUM

TCG-Bright is a medium height, medium early maturity durum variety with excellent seed color quality; yield has been very good in Western ND (Minot West). TCG-Bright has good standability in Western ND and has a good general regional disease package but is susceptible to scab, so fungicide is mandatory.
